

We've been working hard to

keep you safe

Patient screenings, face masks, increased PPE, frequent disinfecting, social distancing: we've been following CDC **recommendations** with fidelity.

We have incorporated **air purifiers** with HEPA 13 filters to keep the air clean and remove viruses like COVID 19 in the air.

ANACAPA
DENTAL ART INSTITUTE

We have a **dedicated team member** who is responsible for wiping down all surfaces hourly with dis-infectants .

We've made a lot of positive changes to our safety protocols, but perhaps the most important improvement we've made is how we handle **aerosols** during your procedures.

As you know, COVID-19 and other viral agents can be transmitted through microscopic air-borne particles called aerosols. Our clinic is now **equipped** to reduce aerosols by over 90% throughout every dental procedure.

By using **technology** like our intraoral specialized suction systems we can place high-volume suction inside your mouth, surrounding our work area to continuously remove aerosols at the **source**.

We have invested in high strength **Extra Oral Suction** systems to further reduce aerosol in the rooms.

ANACAPA
DENTAL ART INSTITUTE

Following your treatment all rooms are thoroughly cleansed according to stringent OSHA and CDC protocols and these rooms will not be used for at least 30-minutes to an hour to allow the **air purifiers** to do their work

Our top priority is always your health, **safety** and well-being. The choices we make to keep you safe are research-based and with your best interests at heart.
